

18 WEEKS CPH MARATHON TRAINING PLAN

ADVANCED

This is where the journey begins towards your Copenhagen Marathon!

YOUR STARTING POINT

This training programme is suited for you who've already run one or more marathons or half marathons, who is ambitious and prepared to invest time and energy into taking your running to the next level. Your training sessions are currently 15 km or more, and you train up to 5 times a week.

YOUR TRAINING

Over the next 18 weeks you will be training 5 times a week to reach your goal of becoming a better and faster marathon runner. Being an experienced and highly motivated long-distance runner, it will be natural for you to define a time goal for yourself, perhaps even an ambitious one such as 3 – 3.5 hours. When training for a marathon, volume and lots of easy pace training is the key to success. Your basic physical condition is really good which enables you to have a high weekly mileage. At your level, you need to also prioritize your tempo runs and interval sessions, that will improve your top speed making you more enduring and faster at the same time.

YOUR GOAL

You are most probably motivated to run faster and even aim for a personal best. You are quite good at estimating your different training paces and have a good sense of your strengths and weaknesses. Your main task will be to analyze more and to fine-tune your paces and intervals in order to further improve while staying injury-free.

YOUR TRAINING SESSIONS

Easy runs

Volume, volume, and more volume. Long runs in a slow pace are the main ingredient in every marathon training plan, regardless if you are a first-timer or a pro. This is where you build up your muscles, tendons and joints to endure the strain you'll be putting on your body when training for and running a marathon. Your pace should be slow enough to keep a conversation while running, which would be about 45 seconds – 1 minute slower per kilometer than your 10 km pace.

Tempo runs

At your level, tempo runs are an absolute must to improve and become faster. A tempo run is *not* a speed session, but an exercise in determining your marathon (race day) pace. Maybe you already know your marathon pace and can focus on the next task, which is to strike your exact marathon pace right away, so you don't run too fast, and eventually "hardcode" it into your body memory so that you can get into your marathon pace even without a GPS watch. You should run faster than your slow/easy runs, but still be able to run a few more kilometres than your training plan, if you had to. Otherwise, you are running to fast.

Intervals

If you're not already running intervals, this is definitely your next move after you've established a nice routine with your tempo runs. Tuesdays could be good choice for intervals, while Thursdays are for tempo runs. Your interval pace shouldn't be all out, but still faster than your marathon pace and closer to your half marathon race pace than your 10 km race pace. Begin for example with 4 x 1 km with 1 minute pause in between. Looking two months ahead, you could aim for 4 x 1.5 km or 3 x 2 km with 1 minute pause. As your shape gradually improves and you gain more experience, you'll become better at assessing your pace and adjusting your intervals.
